# Environmental Charter

Our hotel is firmly committed to integrating environmental concerns into all of its operations. We are aware of our responsibility towards the planet and the community to which we belong. We have therefore drawn up this environmental charter to formalise our commitments and to raise awareness among our entire team, our partners, our suppliers and our guests of the importance of protecting the environment.

## Staff Awareness and Training

**Specific Training:** Our environmental manager receives ongoing training on sustainable tourism, environmental protection and CSR (Corporate Social Responsibility).
**Continuous Awareness:** We are committed to regularly raising awareness and educating our teams about environmental issues through training sessions and internal meetings.
Our teams are trained in the eco-friendly practices to follow in their daily tasks.
We encourage our staff to use green mobility (cycling, public transport, walking) for their daily commute.

## Saving Water and Energy

**Optimising Resources:** We are committed to optimising the use of water and energy in our facilities by adopting efficient technologies and encouraging responsible behaviour among our staff and guests.

All of our lighting is LED, which saves energy while offering our guests the same level of comfort.
We have installed motion sensors and timers in common areas and corridors to limit energy waste.
We have installed flow restrictors on taps and showers so as not to deplete water resources.

**Reducing Waste:** We have implemented concrete measures to reduce water and energy waste by monitoring our consumption and raising our teams' awareness of responsible use.

We read our water and electricity meters every month to better manage our consumption.

**Waste Reduction**

**Reduction at Source:** We strive to minimise waste production by favouring reusable, recyclable or biodegradable packaging wherever possible.

We mainly use bulk products for our Breakfast Buffet, or large-format packaging, to limit unnecessary packaging.

We provide refillable Ecopump guest toiletries to reduce packaging waste. We can also offer other products on request to better meet our guests' needs.

**Waste Sorting:** We have set up a waste sorting system throughout the hotel to ensure that waste is recycled and recovered.

We sort all types of waste (Cardboard/Paper/Plastic/Metal/Glass) as well as bio-waste, which is collected by a specialist company for recovery. We encourage our guests to sort their waste too by providing collection points at the hotel.

**Responsible Purchasing and Local Suppliers**

**Prioritising Local Suppliers:** We give priority to local suppliers and regional products to reduce our carbon footprint and support the local economy.

**Environmentally Friendly Products:** We favour the purchase of environmentally friendly products, giving preference to eco-labels and choosing sustainable options.

**Communication with Guests**

**Transparent Information:** We communicate our environmental commitments transparently to our guests.

**Encouraging Participation:** We encourage our guests to adopt eco-friendly practices during their stay by providing them with information on the actions they can take (Waste Sorting, Green Mobility, Eco-friendly Practices).

We provide our guests with information about local wildlife and plant life. We also offer alternatives to limit car travel (bike rental, public transport, shuttle).

**And much more:**

We regularly support local second-hand and reuse centres by donating our equipment and furniture whenever possible.

We are committed to reducing our CO2 emissions by promoting sustainable means of transport and investing in more environmentally friendly technologies.

We recognise that this charter is a dynamic commitment, and we undertake to review it periodically to adapt it to technological developments and environmental best practices.

We are determined to work together towards a more sustainable future and to actively contribute to the preservation of our beautiful planet.

**Thank you for supporting our approach!**
